PROJECTS

ORATOR

Java, XML

Orator is an Android app that converts text in images to text that can be copied to clipboard or converted to speech according to the user's choice. It uses optical character recognition (OCR) technology to recognize text in images, convert it to digital text, and use text-to-speech (TTS) technology to read the text aloud.

DRUM KIT

HTML, CSS, JavaScript

A virtual Drum Kit for all the drum enthusiasts out there.

PULSE

Next.js, TypeScript, OpenAI, Tailwind CSS

A cutting-edge AI SaaS platform that enables users to create, discover, and enjoy podcasts with advanced features like text-to-audio conversion with multi-voice AI, podcast thumbnail image generation, and seamless playback.
